PROFESSIONAL EXPERIENCE

SingularX

Technical Lead

West Lafayette, IN (Remote)

November 2025 - Present

- Built Value Indiana, live across 5 Indiana counties, with parcel search, regression valuations, and PDF reports
- Led development of launch-ready municipal software with React, Node.js, and Express.js for permit workflows, AI screening, and code enforcement
- Migrated legacy county records into indexed search for municipal permit and code-enforcement workflows
- Built reusable AI-assisted workflows with specialized agents, codebase context, and automated validation

CSI Vision

Forward Deployed Software Engineer

Gwanggyo, South Korea

May 2025 - July 2025

- Engineered a real-time Python pipeline using YOLOv11, OpenCV, and a WebSocket server to stream object coordinates to Unity at sub-50ms response time
- Automated calibration to cut on-site setup to 30 minutes, enable 5 same-day client demos, and reduce restaurant client setup time by 70%

Naver Cloud

Software Engineer Intern

Pangyo, South Korea

June 2023 - August 2023

- Shipped internationalization pipelines for 3 new languages (English, Mandarin, Vietnamese), expanding support to 100,000+ global users and resolving UTF-8 character-encoding edge cases

PROJECTS

Value Indiana | valueindiana.com

Python, Flask, MySQL, scikit-learn, JavaScript

November 2025 - Present

- Designed parcel database schema, CSV imports, and indexed queries for sub-200ms lookups
- Built interactive valuation workflows with editable comparable-property grids, session-based user overrides, token-gated analysis, and automated report generation

SingularX Website | thesingularx.com

Next.js, React, Prisma, Stripe, Playwright

- Built a full-stack SaaS site with authentication, payments, realtime features, and Playwright tests
- Built an AI content-protection gateway with agent detection, per-article policies, and request logging

HackHarvard 2025 - Votify | github.com/dylandrozario/Votify

Node.js, Python, Express.js

October 2025

- Orchestrated a 3-model workflow with Gemini, Perplexity, and Llama using Node.js, Express.js, Python, and REST APIs to cross-validate political commitments against source documents
- Processed 25+ source documents through 500+ model requests, linking 99% of political commitments directly to their supporting source documents

EDUCATION

Purdue University

Bachelor of Science in Computer Science (Software Engineering)

West Lafayette, IN

May 2026

TECHNICAL SKILLS

Languages: JavaScript, Python, SQL

Frameworks & Libraries: React.js, Express.js, Flask, scikit-learn, OpenCV, YOLOv11

Platforms & Tools: Node.js, SQLite, MySQL, Git, Playwright, AWS S3, WebSockets
